

CHECKMATE CHECKLISTS

Standard size 6.5" x 9" checkmate plastic cards are the most durable medium available. This material is expensive to produce but eliminates the common delaminating inherent in laminated paper products. Our plastic card quality makes a difference. The top 2/3's of the front is the actual checklist section covering everything from INITIAL to SECURING. We are frequently told that ours is the most useful, most complete, and most intelligent in the industry. Professional pilots will tell you, that as long as they are complete and concise, single page formats are most always preferred. Safety organizations across the U.S. endorse our format. Below the checklist items, in the yellow section, are all the V speeds, not just a partial listing. Our V Speeds are in front of you at all times, not tucked away in a chart somewhere. We even add V speeds for Va and Best Glide at lighter weights. This is important since these speeds are slower with less weight. All speeds are given in KNOTS and MPH. The bottom section shows proper configuration and data for DEPARTURE, CRUISE, and ARRIVAL, such as speeds, flaps, power settings and special notes. On the back are the EMERGENCY procedures with the subject headings highlighted in red; No time lost reading excessive wording or critical time lost searching through a flip book for the correct procedure .. just concise, logical data that is INSTANTLY available. Again, you will notice our procedures are complete. Next are light gun signals and common frequencies. The yellow box in the corner gives useful information such as loads, fuel type and capacity, oil, electrical, and tire information. Data you actually use on each flight.

CHECKMATE - BELLANCA

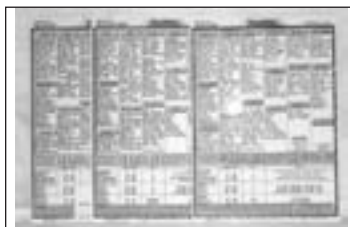

Standard size 6.5" x 9" checkmate plastic cards are the most durable medium available. This material is expensive to produce but eliminates the common delaminating inherent in laminated paper products. Our plastic card quality makes a difference. Data you actually use on each flight.
